The Scotts Easy Guide: The Best From Nursery Stock

➤ Before potting on liners to larger pots give a Peters Professional **Plant Starter** feed of 10+52+10 to encourage new root growth into new compost.

➤ Mid season after heavy rain available nutrients may have been washed out and controlled release fertilisers take time to build up nutrients again so anticipate stress and starvation and get back on track with a couple of feeds of Peters Professional 18+10+18 or Universol 18+11+18.

➤ Just before sale give containers a feed of Peters Professional **Plant Finisher** 6+18+36 to improve leaf colour and generally make the plant look its best.
