

Growing Solutions

The Scotts Easy Guide: Optimising The Growth Of Hedging

Species 1 Year (e.g. Buxus)

Agroblen ensures a balance of nutrients throughout the growing season. This results in continuous growth and reduced environmental impact through minimal leaching

- Use Agroblen Total 15+8+16 5-6 months.
- Rate 700 kg/ha.
- Apply either as a drill or as a band preferably by hand machine or tractor mounted machine.
- One application per season.

Species 2 YEAR (e.g. Alder Beech and other native species)

- Use Agroblen Total 15+8+16 12-14mth
- Rate 700 kg/ha
- Apply either as a drill or as a band preferably by hand machine or tractor mounted machine
- One application per season

Agroblen is a blend of slow release fertilisers (utilising bacteria) and controlled release fertilisers (utilising temperature) designed to release nutrients over the whole season.
