

Turf Solutions

Rochford Hundred Golf Club – Rochford, Essex

Head Greenkeeper

Dave Rand: Tel. 07835 709407

Areas Applied To

Greens, Aprons and two fairways.

Application Rate

- 8 x 0.4 litres per hectare on greens
- 6 x 1.2 litres per hectare on aprons
- 6 x 2.4 litres per hectare on two fairways

Comments From Head Greenkeeper

The use of Primo MAXX during 2006 gave some excellent results. The greens supported dense swards with excellent colour. The slower vertical growth resulted in a 50% reduction in clipping yields with less pressure to increase the frequency of cut. Subsequently good afternoon speeds were maintained even though commencement of green mowing was often at 6.00am. Similar results were achieved on the aprons and the two treated fairways, they also required less frequent mowing whilst maintaining definition and cleanness of cut. I intend to repeat the same programmes to greens and aprons in 2007 but to also implement full programmes on all tees and to an increased total of six fairways.

Growing success
